ABOUT LOTTE CHEMICAL

As a leading petrochemical corporation in Asia, Lotte Chemical currently operates several ethylene production facilities in Asia and has a wealth of experience in ethylene production and project management.

Established in 1976 and based in South Korea, Lotte Chemical is a global petrochemical company with manufacturing facilities in South Korea, China, Malaysia, Indonesia, Pakistan, United Kingdom and the United States. Lotte Chemical is committed to advancing technologies that will build a better world for all through products that can be found everywhere from basic household articles to medical and cutting-edge aeronautic materials.

Lotte Chemical has built a green management system (GMS) to manage environmental factors efficiently according to the adoption of low-carbon green management. Lotte strives to efficiently use resources and energy to minimize greenhouse gas emissions and environmental pollution.

Axiall and Lotte will be joint venture partners in the proposed ethylene production facility. Lotte also plans to build a monoethylene glycol (MEG) plant adjacent to the proposed cracker.
